Contents

1 PanPhaseDiagram Examples	1
Example 1.1 Al-Mg Binary Phase Diagram	3
Example 1.2 Phase Fraction as a Function of Composition	6
Example 1.3 Phase Fraction as a Function of Temperature	9
Example 1.4 Point Calculation at Fixed Temperature and Composition	12
Example 1.5 Isotherm of Al-Mg-Zn at 500°C	15
Example 1.6 Isopleth of Al-Mg-Zn at 15 at% Zn	19
Example 1.7 Liquidus Projection of Al-Mg-Zn	22
Example 1.8 Solidification Simulation by Scheil Model and Lever Rule	25
Example 1.9 Calculation of Gibbs Energy Curves	31
Example 1.10 Calculation of Activity at Constant Temperature	35
Example 1.11 Calculation of Activity at Constant Composition	38
Example 1.12 Calculation of Molar Volume and Density at Fixed Temperature	41
Example 1.13 Calculation of Molar Volume and Density at Fixed Composition	45
Example 1.14 Density Contour Diagram	48

Example 1.15 Activity Contour Diagram	51
Example 1.16 Pressure Contour Diagram	54
Example 1.17 3D Diagram	57
Example 1.18 Temperature-Pressure Diagram	61
Example 1.19 Phase Fraction Contour Diagram for Ti64	64
Example 1.20 Phase Forming Driving Force in High Entropy Alloys	67
Example 1.21 User-defined Property	71
Example 1.22 Run Pandat in Console Mode	73
Example 1.23 High Throughput Calculation (HTC): Pattern Compositions ..	75
Example 1.24 High Throughput Calculation (HTC): Random Compositions	80
Example 1.25 Friction-stir welding between AA5454 Al alloy and AZ91 Mg alloy	82
Example 1.26 Calculation of Open Circuit Voltage (OCV) under Equilibrium Condition	85
Example 1.27 Para-equilibrium Phase Diagram	91
Example 1.28 Calculation of T0 curve	95
Example 1.29 Material to Material Calculation: Friction- stir welding between AA5454 Al alloy and AZ91 Mg alloy	98
2 PanOptimizer Example	101
Example 2.1 Parameter Optimization for the Fe-Cr-Ni Ternary System	102

3	PanEvolution/PanPrecipitation Examples	106
Example 3.1	Precipitation Simulation of Ni-14Al (at%) Alloy	107
Example 3.2	TTT diagram of Ni-14Al (at%) Alloy	115
Example 3.3	Co-precipitation of γ' and γ'' in Ni-Al-Nb Ternary	118
Example 3.4	Simulation of Hardness of Aluminum Alloy 6005	124
Example 3.5	Simulation of Softening of Aluminum Alloy 6005	129
Example 3.6	Simulation of Yield Strength of Aluminum Alloy 356	134
Example 3.7	CCT diagram of Ni-14Al (at%) Alloy	138
4	PanDiffusion Examples	141
Example 4.1	Diffusion within a Single Phase: Uniform Initial Compositions	142
Example 4.2	Diffusion within a Single Phase: Linear Initial Compositions	146
Example 4.3	Diffusion between Two Phases: Uniform Initial Compositions	149
Example 4.4	Diffusion between Two Phases at Varied Temperatures	152
Example 4.5	Diffusion among Multiple Regions	155
Example 4.6	Carburization with Fixed Composition at Boundary	158
Example 4.7	Carburization with Input Flux	160
Example 4.8	Carburization of a Tube with Fixed Environmental Activity	163
Example 4.9	Dissolution of γ' Particle in γ Matrix	166

Example 4.10 Transformation from γ to α	169
Example 4.11 Fe-Si-C Uphill Diffusion	172
Example 4.12 Dissolution of a Single θ -Al ₂ Cu Particle in FCC Matrix	175
Example 4.13 Dissolution of Multiple Particles	178
Example 4.14 Decarburization of Fe-C Matrix	181
5 PanSolidification Examples	184
Example 5.1 Solidification Simulation of a Mg-Al alloy under a Given Cooling Rate	185
Example 5.2 Prediction of Hot Cracking Susceptibility of an Al-Cu-Mg Alloy	189
Example 5.3 Hot Cracking Susceptibility Map of Al-Cu-Mg at Al-Corner ...	195
