Contents

1. PanPhaseDiagram.....	1
Example 1.1 Al-Mg Binary Phase Diagram	1
Example 1.2 Phase Fraction as a Function of Composition.....	4
Example 1.3 Phase Fraction as a Function of Temperature	7
Example 1.4 Point Calculation at Fixed Temperature and Composition	10
Example 1.5 Isotherm of Al-Mg-Zn at 500°C.....	13
Example 1.6 Isoleth of Al-Mg-Zn at 15 at% Zn.....	16
Example 1.7 Liquidus Projection of Al-Mg-Zn	19
Example 1.8 Solidification Simulation by Scheil Model and Lever Rule.....	22
Example 1.9 Calculation of Gibbs Energy Curves	27
Example 1.10 Calculation of Activity at Constant Temperature	31
Example 1.11 Calculation of Activity at Constant Composition.....	34
Example 1.12 Calculation of Molar Volume and Density at Fixed Temperature	37
Example 1.13 Calculation of Molar Volume and Density at Fixed Composition.....	41
Example 1.14 Density Contour Diagram	44
Example 1.15 Activity Contour Diagram.....	47
Example 1.16 Pressure Contour Diagram.....	50
Example 1.17 3D Diagram	53
Example 1.18 Temperature-Pressure Diagram	57
Example 1.19 Phase Fraction Contour Diagram for Ti64	60
Example 1.20 Phase Forming Driving Force in High Entropy Alloys	63
Example 1.21 User-defined Property	67
Example 1.22 Run Pandat in Console Mode	69
Example 1.23 High Throughput Calculation (HTC): Pattern Compositions.....	71
Example 1.24 High Throughput Calculation (HTC): Random Compositions	76
Example 1.25 Friction-stir welding between AA5454 Al alloy and AZ91 Mg alloy	77
Example 1.26 Calculate Open Circuit Voltage (OCV) under Equilibrium Condition.	82
Example 1.27 Para-equilibrium phase diagram calculation	88
2 PanOptimizer	92
Example 2.1 Parameter Optimization for the Fe-Cr-Ni Ternary System.....	92
3 PanPrecipitation.....	95

Example 3.1	Precipitation Simulation of Ni-14Al (at%) Alloy	95
Example 3.2	TTT diagram of Ni-14Al (at%) Alloy	102
Example 3.3	Co-precipitation of γ' and γ'' in the Ni-Al-Nb Pseudo-ternary System	105
Example 3.4	Simulation of Hardness of Aluminum Alloy 6005	110
Example 3.5	Simulation of Softening of Aluminum Alloy 6005	115
Example 3.6	Simulation of Yield Strength of Aluminum Alloy 357	119
4	PanDiffusion	123
Example 4.1	Diffusion within a Single Phase: Uniform Composition on Each Side	123
Example 4.2	Diffusion within a Single Phase: Linear Composition on Each Side	127
Example 4.3	Diffusion between Two Phases: Uniform Composition on Each Side	129
Example 4.4	Diffusion between Two Phases at Varied Temperature: Uniform Composition on Each Side	132
Example 4.5	Diffusion among Multiple Regions	134
Example 4.6	Carburization with Fixed Composition at Boundary	137
Example 4.7	Carburization with Input Flux.....	139
Example 4.8	Carburization of a Tube with Fixed Environmental Activity	141
Example 4.9	Dissolution of γ' Particle in γ Matrix	143
Example 4.10	Transformation from γ to α	146
Example 4.11	Fe-Si-C Uphill Diffusion	148
Example 4.12	Dissolution of a Single θ -Al ₂ Cu Particle in FCC Matrix	152
Example 4.13	Multi-Particles Dissolution	155
Example 4.14	Decarburization of Fe-C Matrix	158
5	PanSolidification	161
Example 5.1	Solidification simulation of Mg-Al alloy under specified cooling rate	161
Example 5.2	Solidification simulation of an Al-Cu-Mg alloy for hot cracking susceptibility index prediction	165
Example 5.3	HTC calculations in PanSolidification.....	170
6	PanPhaseField	176
Example 6.1	Two-step aging of a binary Ni-Al alloy.....	176
